

**"METHOD FOR PREPARING DRUG ELUTING MEDICAL DEVICES AND
DEVICE OBTAINED THEREFROM"**

ABSTRACT

The present invention relates to a method for preparing a
5 drug eluting medical device comprising the application to
a stent of a polymer having functional groups capable of
chemically binding biological molecules, characterised in
that said application is carried out in a single step by
means of cold plasma methods. Moreover, the invention
10 also relates to a medical device obtained therefrom.
